Silicone Gastronorm Lids

'seal fresh, serve fresh'

Silicone Gastronom Lids

A range of reusable food-grade silicone lids that fit most international sizes of gastronorm trays and steam pans, including stainless steel, plastic, polycarbonate, melamine and ceramic used in professional kitchens.

Flexsil-Lid™ by Wrapmaster® is a reusable, time-saving option for day-to-day preparation in professional kitchens. The National Sanitation Foundation certified silicone lids have a unique, patented, lip-lock design that lock in freshness and reduce food waste with an airtight seal. Flexsil-Lid™ by Wrapmaster® silicone gastronorm lids are highly flexible, durable and reusable multiple times.

Flexsil-Lid™ by Wrapmaster® silicone lids have multiple uses when used with gastronorm containers, including cooking in the oven or microwave up to 220°C / 428°F, freezing to -40°C / -40°F and when used for storage in cold stores or fridges.

When used with racking trolleys, the leak proof seal and smooth silicone edges of Flexsil-Lid™ by Wrapmaster® help to prevent the risk of spillage, burns from hot food products and the gastronorm containers sliding during transport.

Flexsil-Lid™ by Wrapmaster®, invented by Australian Chef Albert David, provides a clear environmental alternative to many single use items.

Locks in freshness and reduces food waste with an airtight seal

Flexible, durable and reusable multiple times

Oven and microwave safe up to 220°C / 428°F

Freezer safe to -40°C / -40°F

Transportable and stackable
